

### Experiences:

#### Game 1: [Race The Sun](#)

It's an arcade racing game where it's you against the sun and various zones with obstacles in between. We liked the excitement and sheer speed of the game, but, it can get dizzying to play.

#### Game 2: [Titanic VR Demo](#)

It's like an educational demo about the Titanic. The visuals are very real but, it's a little bit boring as we cannot really move around and interact as much. It's like being a part of dynamic museum dioramas.

#### Game 3: [Bigscreen Beta](#)

It allows us to project our computer screen into virtual environments with friends. We enjoyed being able to watch a movie or YouTube with friends, and saw the potential in screensharing in VR. But you're wearing a VR headset while using a computer essentially, so knowing how to touch type is essential.

### Suggestions:

#### [The Night Café: A VR Tribute to Vincent Van Gogh](#)

It can allow you to become part of a Van Gogh work. It doesn't need realism to accomplish immersion, but it did have dynamic sound, where the sound from the piano player would actually vary depending on how close or far and where you were facing.

#### [New Retro Arcade: Neon](#)

Like Bigscreen or Rec Room, New Retro Arcade gives players their own personal playground, or in this case, an arcade.
